

# ESRI ARCSDE

## TRAINING OBJECTIVES

This ArcSDE training session is intended for anyone who wants to administer spatial databases and manage GIS data with Esri technology.

### TARGET AUDIENCE

Computer Systems and GIS Administrators

### PREREQUISITE

Knowledge of relational database management and an advanced level of ArcGIS Pro

Coming to training with your own laptop, the Esri ArcGIS Pro license installed and active

Please note that this training requires rigorous technical prerequisites, depending on the database used (<https://pro.arcgis.com/fr/pro-app/latest/tool-reference/data-management/create-enterprise-geodatabase.htm>); for more details, please contact us

### EDUCATIONAL RESOURCES

Digital course material given to the trainee (with concrete cases, practical exercises, technical sheets)

Evaluation questionnaires and certificate of completion of training

**DURATION** > 1.5 days

### REGISTRATION

Email > [formation@arxit.com](mailto:formation@arxit.com)

Consulting us for accessibility for people with disabilities

## PROGRAM

Understanding how "SDE" works

Install multi-user geodatabase technology and configure a relational database management system

Create and connect to a multiuser geodatabase

Secure Data Access: Managing User Roles and Privileges

Load and update data in a multiuser geodatabase

Data Storage Optimization

Learn how to handle versioning and historization
